krenkroyt@gmail.com

As an experienced Python full-stack developer, I possess a strong understanding of Python programming concepts, syntax, and data structures. I am proficient in web development frameworks such as Flask and Django, which have allowed me to develop efficient and robust web applications. Additionally, I have a solid understanding of front-end web technologies, including HTML, CSS, and JavaScript.

I am also experienced in working with relational databases such as MySQL and PostgreSQL. I have a thorough understanding of database design principles and am able to write SQL queries to efficiently retrieve and manipulate data. Furthermore, I am proficient in using Git for version control, allowing me to keep track of changes to my code and collaborate with other developers.

I have extensive experience in debugging and testing, including writing unit tests and using tools like PyCharm and Visual Studio Code for debugging. In addition to my technical skills, I possess strong communication and problem-solving skills and am always willing to learn and adapt to new technologies.

As a former 1C developer turned Python developer, I have several advantages that can benefit any team. My experience with 1C has provided me with programming skills, database management, and project management experience that can be applied to Python development. Additionally, the fundamental principles of programming remain the same, regardless of the language, so my experience in 1C programming can be leveraged in my work with Python.

Furthermore, my experience working with databases in 1C can be a valuable asset in Python development, given that Python is also used for database management. Additionally, Python is a more versatile programming language than 1C, with applications in scientific research, web development, machine learning, data analysis, gaming, and more. Therefore, my experience with 1C programming, combined with my knowledge of Python, can enable me to develop a broad range of skills applicable to various industries.

Finally, my experience as a 1C developer has given me project management and team management skills, which can be applied to Python development, particularly in managing larger projects. Overall, my background as a former 1C developer and current Python developer provides me with a unique skill set that can bring value to any team.
